SUBJECT INDEX OF VOLUME 71*

Boundary element methods

On the symmetrization of the BEM formulation, A. Kanarachos and Ch. Provatidis (2) 151 – 165
Boundary element method applied to certain structural-acoustic coupling problems, M. Tanaka and Y. Masuda (2) 225 – 234

Coupled problems

Boundary element method applied to certain structural-acoustic coupling problems, M. Tanaka and Y. Masuda (2) 225 – 234

Dynamics

On the symmetrization of the BEM formulation, A. Kanarachos and Ch. Provatidis (2) 151 – 165
A modified Lagrangian formulation for the dynamic analysis of constrained mechanical systems, E. Bayo, J. Garcia de Jálon and M.A. Serna (2) 183 – 195
Boundary element method applied to certain structural-acoustic coupling problems, M. Tanaka and Y. Masuda (2) 225 – 234
A recursive formulation for flexible multibody dynamics, Part I: Open-loop systems, S.S. Kim and E.J. Haug (2) 291 – 312
Some thoughts on shell modelling for crash analysis, J. Argyris, H. Balmer and I.St. Doltsinis (3) 341 – 365

Elasticity

Computational finite element analysis and optimal design for multibody contact system, W.-Q. Cheng, F.-W. Zhu and J.-W. Luo (1) 31 – 39
On the symmetrization of the BEM formulation, A. Kanarachos and Ch. Provatidis (2) 151 – 165
Suboptimal cycle bases of graphs for the flexibility analysis of skeletal structures, A. Kaveh (3) 259 – 271

* The issue number is given in front of the page numbers.

Electromagnetic fields

Response of stiffened plated structures under stochastic excitation, A. Mukherjee and M. Mukhopadhyay (3) 273 – 292

Finite element and matrix methods

Computational finite element analysis and optimal design for multibody contact system, W.-Q. Cheng, F.-W. Zhu and J.-W. Luo (1) 31 – 39
On the updating and assembly of the Hessian matrix in finite element methods, O. Axelsson and J. Maubach (1) 41 – 67
Elastoplastic nonlinear post-buckling analysis of partially restrained space structures, K.-M. Nee and A. Haldar (1) 69 – 97
Shape optimal design using high-order elements, Y.K. Shyy, C. Fleury and K. Izadpanah (1) 99 – 116
Application of the moving finite element method to moving boundary Stefan problems, M.J. Djomehri and J.H. George (2) 125 – 136
A new finite element based Lax–Wendroff/Taylor–Galerkin methodology for computational dynamics, K.K. Tamma and R.R. Namburu (2) 137 – 150
Generating optimal topologies in structural design using a homogenization method, M.Ph. Bendsøe and N. Kikuchi (2) 197 – 224
Nonlinear versions of flexurally superconvergent elements, W.K. Liu, T. Belytschko and J.-S. Chen (3) 241 – 258
Suboptimal cycle bases of graphs for the flexibility analysis of skeletal structures, A. Kaveh (3) 259 – 271
Response of stiffened plated structures under stochastic excitation, A. Mukherjee and M. Mukhopadhyay (3) 273 – 292
A two-dimensional FEM adaptive moving-node method for steady Euler flow simulations, B. Palmerio (3) 315 – 340
Some thoughts on shell modelling for crash analysis, J. Argyris, H. Balmer and I.St. Doltsinis (3) 341 – 365

Fluid mechanics

Velocity field estimates and three-dimensional discrete vortex methods, R.W. Bartholomew (1) 15 – 29
A two-dimensional FEM adaptive moving-node method for steady Euler flow simulations, B. Palmerio (3) 315 – 340

General Rayleigh–Ritz and Galerkin techniques

On the symmetrization of the BEM formulation, A. Kanarachos and Ch. Provatidis (2) 151 – 165

Heat and diffusion

On a variable time-step method for the one-dimensional Stefan problem, N.S. Asaithambi (1) 1 – 13

Incompressible and near incompressible media

Velocity field estimates and three-dimensional discrete vortex methods, R.W. Bartholomew (1) 15 – 29

Nonlinear mechanics

Computational finite element analysis and optimal design for multibody contact system, W.-Q. Cheng, F.-W. Zhu and J.-W. Luo (1) 31 – 39
On the updating and assembly of the Hessian matrix in finite element methods, O. Axelsson and J. Maubach (1) 41 – 67
Elastoplastic nonlinear post-buckling analysis of partially restrained space structures, K.-M. Nee and A. Haldar (1) 69 – 97
A computational strategy for making complicated structural problems simple, A.K. Noor and J.M. Peters (2) 167 – 182
A recursive formulation for flexible multibody dynamics, Part I: Open-loop systems, S.S. Kim and E.J. Haug (3) 293 – 314
Some thoughts on shell modelling for crash analysis, J. Argyris, H. Balmer and I.St. Doltsinis (3) 341 – 365

Numerical solution procedures

On a variable time-step method for the one-dimensional Stefan problem, N.S. Asaithambi (1) 1 – 13
Velocity field estimates and three-dimensional discrete vortex methods, R.W. Bartholomew (1) 15 – 29
On the updating and assembly of the Hessian matrix in finite element methods, O. Axelsson and J. Maubach (1) 41 – 67
Elastoplastic nonlinear post-buckling analysis of partially restrained space structures, K.-M. Nee and A. Haldar (1) 69 – 97
Application of the moving finite element method to moving boundary Stefan problems, M.J. Djomehri and J.H. George (2) 125 – 136
A new finite element based Lax–Wendroff/Taylor–Galerkin methodology for computational dynamics, K.K. Tamma and R.R. Namburu (2) 137 – 150
A computational strategy for making complicated structural problems simple, A.K. Noor and J.M. Peters (2) 167 – 182
Suboptimal cycle bases of graphs for the flexibility analysis of skeletal structures, A. Kaveh (3) 259 – 271

Optimization

Computational finite element analysis and optimal design for multibody contact system, W.-Q. Cheng, F.-W. Zhu and J.-W. Luo (1) 31 – 39
Shape optimal design using high-order elements, Y.K. Shyy, C. Fleury and K. Izadpanah (1) 99 – 116

Optimization and design of structures

Generating optimal topologies in structural design using a homogenization method, M.Ph. Bendsøe and N. Kikuchi (2) 197 – 224

Plasticity

Elastoplastic nonlinear post-buckling analysis of partially restrained space structures, K.-M. Nee and A. Haldar (1) 69 – 97
Some thoughts on shell modelling for crash analysis, J. Argyris, H. Balmer and I.St. Doltsinis (3) 341 – 365

Shells and plates

Boundary element method applied to certain structural-acoustic coupling problems, M. Tanaka and Y. Masuda (2) 225 – 234
Response of stiffened plated structures under stochastic excitation, A. Mukherjee and M. Mukhopadhyay (3) 273 – 292
Some thoughts on shell modelling for crash analysis, J. Argyris, H. Balmer and I.St. Doltsinis (3) 341 – 365

Structural mechanics

Elastoplastic nonlinear post-buckling analysis of partially restrained space structures, K.-M. Nee and A. Haldar (1) 69 – 97
On the symmetrization of the BEM formulation, A. Kanarachos and Ch. Provatidis (2) 151 – 165
A computational strategy for making complicated structural problems simple, A.K. Noor and J.M. Peters (2) 167 – 182
Nonlinear versions of flexurally superconvergent elements, W.K. Liu, T. Belytschko and J.-S. Chen (3) 241 – 258
Suboptimal cycle bases of graphs for the flexibility analysis of skeletal structures, A. Kaveh (3) 259 – 271
A recursive formulation for flexible multibody dynamics, Part I: Open-loop systems, S.S. Kim and E.J. Haug (3) 293 – 314
Some thoughts on shell modelling for crash analysis, J. Argyris, H. Balmer and I.St. Doltsinis (3) 341 – 365

Supersonic flow

A new finite element based Lax–Wendroff/Taylor–Galerkin methodology for computational dynamics, K.K. Tamma and R.R. Namburu (2) 137–150
A two-dimensional FEM adaptive moving-node method for steady Euler flow simulations, B. Palmerio (3) 315–340

Transonic flow

A two-dimensional FEM adaptive moving-node method for steady Euler flow simulations, B. Palmerio (3) 315–340

Transport phenomena

On a variable time-step method for the one-dimensional Stefan problem, N.S. Asaithambi (1) 1–13

Viscous flow

Velocity field estimates and three-dimensional discrete vortex methods, R.W. Bartholomew (1) 15–29
